What Does the Future Hold?

A Commentary by Michael Bailey

The existing global financial system has already begun its progressive implosion and there is virtually nothing that can stop it! Not even a return to the gold standard of old will stem the collapse of a system that was conceived, born and built for the sole purpose of covertly extracting wealth from the middle class and placing it into the hands of governments and banksters. This same system has robbed its victims, we the people, of not only our wealth but the purchasing power of our currency as well; a double whammy . . .

However, the irony isn't lost. The more governments and central banks tighten their capital controls and step up their war on cash claiming they are fighting money laundering, black markets and tax cheats, which is of course sheer nonsense, the faster the mainstream public will adopt cryptocurrency. As decentralized cryptocurrencies and blockchain technology begin to wind their way into the mainstream, millions of jobs will be lost to automation and software as people are forced to confront, face and re-examine the purpose of their lives. No longer will we be slaves to jobs we despise or overburdened by unsustainable levels of consumer and credit card debt. Governments have engaged in manipulative and covert deficit spending for millennia by debasing their currencies, issuing bonds and indebting their future citizens without their consent, and these policies and activities are swiftly coming to an end. Those on the forefront of this evolutionary wave of transformation will move or have already moved into careers and livelihoods that are chosen and driven by their passion for doing something they love to do while helping others to do the same.

What kinds of jobs will be lost? Who needs entire staffs of accountants and lawyers when blockchains and smart contracts run the majority of business? Who needs a broker or an underwriter when insurance becomes primarily a function of transparent public blockchains running smart contract platforms like Ethereum, Rootstock and Lisk?

Worldwide, banks, financial institutions and insurance companies have flocked en masse to join "blockchain" consortiums like R3CEV only to leave less than a year later because they suddenly realized that to move forward meant they would have to cooperate with each other and that they couldn't patent open source software. Perhaps they realized the ridiculous notion of permissioned, private blockchains in such a rapidly shifting culture? Not likely . . however, by the time those who seek to usurp the unstoppable power of Bitcoin realize that it won't work, it will be too late. We are going to see disruption the likes of which have NEVER before been seen on this planet. And those who have already transitioned into careers and life paths that are predicated on what brings them joy, what their passion is and how they can help others will be an immense inspiration and a radiant beacon of hope.
to the frightened, disillusioned, huddling, petrified masses of slaves to menial jobs and mountains of debt.

And it’s not just technology and finance that are evolving. Any individual or entity that does not think, plan and act with complete authenticity, transparency and integrity will instantly be recognized for who and what they really are. Banksters are by far the most arrogant, selfish, greedy, ego-maniacal and narcissistic individuals on the planet and they and their ilk will be the first to fail and fall, publicly.

Think for a moment . . . why would anyone pay financial institutions that have publicly demonstrated that they cannot be trusted (like the Federal Reserve, ECB, the IMF or Wells Fargo, to name just a few) to store digital assets like the US dollar or Bitcoin, which can be stored just as securely, if not moreso, on desktop or laptop computers and smartphones? Why would anyone need high-interest credit cards, auto loans and lines of credit when the value of their money truly is a long term store of value and remains stable or even grows in value, and when wealth and purchasing power are no longer clandestinely siphoned off to an elite few? A fundamental shift in global culture is at hand. Make the choice to join the win-win side of this shift, capitalize on the opportunities at hand and ask yourself: Why do I need an untrustworthy, dishonest and disingenuous bank or some other non-value adding intermediary that actually leaches value?

The future is closer than we realize and those with the foresight to join the Nexxus mission, to bring cryptocurrency to the mainstream public and to empower the people to reclaim the sovereignty of their monetary system are the hope, reality and future of humanity. I AM humbly and deeply honored to be a part of such an important mission and to be a part of such an inspiring, talented, transparent and amazing group of like-minded individuals of exemplary integrity.
